

Predator MDC™ v11 - Feature Grid

Feature grid by product license

Abstract

This paper outlines the specific features within Predator Manufacturing Data Collection. Predator MDC is licensed several ways: Enterprise Administrator, Enterprise Client, Administrator, Client, Shop Floor, Express Administrator and Express Client. In addition, Predator MDC is licensed to work with one of the following databases: Microsoft Access, Microsoft SQL Server or Oracle. Each Predator MDC license can be customized using permissions to address the unique requirements of each manufacturer.

- **Predator MDC Enterprise Administrator** is designed for the manufacturing department head or IS/manufacturing project lead to manage real-time MDC processes centered on comprehensive data collection.
- **Predator MDC Enterprise Client** is designed for personnel and users that need to run MDC reports and charts centered on comprehensive data collection.
- **Predator MDC Administrator** is designed for the manufacturing department head or IS/manufacturing project lead to manage real-time MDC processes centered on time and utilization.
- **Predator MDC Client** is designed for personnel and users that need to run MDC reports and charts centered on time and utilization.
- **Predator MDC Shop Floor** is designed for data entry for shop floor personnel.
- **Predator MDC Express Administrator** is designed for the manufacturing department head or IS/manufacturing project lead to manage manual or paper based MDC processes.
- **Predator MDC Express Client** is designed for shop floor personnel for manual or paper based MDC processes.

THIS IS A LIVING DOCUMENT. The information contained in this document represents the current view of Predator Software Inc. on the issues discussed as of the date of publication. Because Predator Software Inc. must respond to changing market conditions, it should not be interpreted to be a commitment on the part of Predator Software Inc., and Predator Software Inc. cannot guarantee the accuracy of any information presented after the date of publication.

Predator MDC is a member of a suite of applications all designed to share common data and components. They all share a common design and philosophy based on our unique understanding of manufacturing processes. Collectively they are known as Predator SFC™.

This document is based on features in Predator MDC v11.0.

NOTE: It is not possible to list every individual feature contained within Predator MDC. The intent of the above table is to determine the capabilities of each license within the Predator MDC family.

One of many

Predator MDC is a stand-alone database driven application built on Predator's common database platform. This common platform is a shared foundation to an entire suite of Predator applications. Shared common data improves overall productivity and minimizes implementation time when adding additional applications. For example, edit a machine's properties and every Predator application is immediately updated including Predator Travelers, Predator MDC, Predator DNC, Predator PDM and Predator Tracker.

Predator's common database platform is an open architecture structure and independent of the actual database server. Currently, it can range from Microsoft Access, Microsoft SQL Server or Oracle depending on the customer's requirements. Predator's common database platform is fully relational and supports powerful object-based design to support an unlimited number of events, parts, personnel, machines, departments, etc.
